

How to prevent wildfires

by Alexis

- Never leave fires unattended**
- Always fully extinguish them with
water & dirt**

-If it's windy keep something like a bucket of water, hose, or fire extinguisher so the fires won't spread quickly

-Only build campfires in designated fire pits cleared of vegetation

- Never burn highly combustible materials like oil soaked rags or gasoline soaked items**
- For events or etc, only use fireworks in safe cleared areas and never on windy days**
- Do not park or drive over any dry grass or brush**

-Clear flammable materials such as piles of leaves or stacked firewood at least 30 feet away from your home

-Space out trees and shrubs so fire cannot easily jump from the ground to the tree canopy

-Avoid burning on windy or extremely hot days, and keep a water source and shovel nearby
